

RETICLE GUIDE

MPR-1C MOA (4-16 HELIX GEN 2 FFP)

A	Floating Center Dot	D	2 MOA Hash Lines
B	0.5 MOA Floating Cross	E	Numbered Hold Marks
C	1 MOA Hash Lines	F	Tapered Bars

DESIGN FEATURES

MPR stands for “Mid-Power Reticle”. This reticle is designed specifically to get the best out of mid-power magnification ranges, with features that enhance performance at both the low end and the high end of the available range.

INTELLIGENT FLOATING FEATURES:

The fine centre dot provides a precise aim point, while the thicker floating cross just outside it remains clearly visible even at minimum zoom. The floating cross also creates finer 0.5 MOA divisions along both axes, allowing for more precise holds close to center without the need for extra hashes.

NUMBERED MARKINGS:

Numbers on the vertical axis allow shooters to quickly find hold points under pressure.

TAPERED BARS:

Bars on the left, right & bottom of the reticle taper out to the edge of your field of view, drawing your eye to the centre at all magnifications without becoming too thick or thin. New to this reticle; the tapered section extends deep into the main reticle itself, thickening the line closer to the center and making it more visible.
